

There are 2 flavours for recharging of DHC environments:

1. Dedicated / single-tenant / Customer-owned:

The whole DHC environment is used by a single customer. Metering and splitting e.g. on vCPU, vMemory, storage consumption/allocation does not make sense for this flavour, as everything belongs to the same customer anyway and the entire costs should go to the AST owning the contract for that customer.

Metering files have naming (example):

DATA_DHC_DHC_SIEDHC02_ZZ_FTH01_VCF_PHYSICAL_fth01bil001_20240728_233003.csv + corresponding CTRL file

DATA_DHC_DHC_SIEDHC02_ZZ_FTH01_VCF_VIRTUAL_fth01bil001_20240728_233003.csv + corresponding CTRL file

For this flavour the country code is set to wildcard “ZZ” as for many customers Poland is responsible for recharging, for other France, etc. So we route to correct country by a mapping in CSI ChargeDB.

Example of WUs for this type of environment (for the whole environment):

Contract	Cost Element	Measured	Accountable Quantity	Measured Quantity	Trigger Quantity	Tariff	Current Revenue	Chargeable	Status
PL PL554-HCI DHC (DHC service support) Aviva-DHC DHC DR management (CS - CO - DHC per DR management environment)		false	2.000			3106.0300	6212.06	true	Active
PL PL554-HCI DHC (DHC service support) Aviva-DHC DHC Lifecycle management (CS - CO - DHC lifecycle management)		false	2.000			4852.4500	9704.90	true	Active
PL PL554-HCI DHC (DHC service support) Aviva-DHC DHC TB (CS - CO - DHC per TB)		true	485.374	485.374		13.1800	6397.23	true	Active
PL PL554-HCI DHC (DHC service support) Aviva-DHC DHC Workload (CS - CO - DHC per workload host)		true	42.000	42.000		471.4400	19800.48	true	Active

2. Shared / multi-tenant / Atos-owned:

Multiple customers are hosted on a single DHC environment. For this flavour measuring each tenant's share of consumption/allocation is essential to achieve fair distribution of costs and recharging.

Metering files having naming (example):

DATA_DHC_DHC_SHR_NL_HRK01_VCF_PHYSICAL2_hrk01bil001_20240728_230301.csv + corresponding CTRL file

DATA_DHC_DHC_SHR_NL_HRK01_VCF_VIRTUAL2_hrk01bil001_20240728_230301.csv + corresponding CTRL file

Note the “2” postfixing the file type. Also for this flavour the country is expected to be set to the ISO compliant 2 letter code, as shared environments are usually managed by 1 country, that is also responsible for its recharging. This data goes automatically to the partition for that country in CSI ChargeDB.

Additionally there are also differences in the content of the DATA and CTRL files for each flavour.

Example of WUs for this type of environment (for 1 of the tenants hosted on that environment):

Contract	Cost Element	Measured	Accountable Quantity	Measured Quantity	Trigger Quantity	Tariff	Current Revenue	Chargeable	Status
NL NLB45-HCI DHC (DHC service support) Akzonobel DHC	Multi-tenant GB memory (CS - CO - DHC MT GB memory)	true	12870.988	12870.988		1.7100	22009.39	true	Active
NL NLB45-HCI DHC (DHC service support) Akzonobel DHC	Multi-tenant policy management VMs (CS - CO - DHC MT Policy management VMs)	true	356.000	356.000		1.4400	512.64	true	Active
NL NLB45-HCI DHC (DHC service support) Akzonobel DHC	Multi-tenant storage TB Bronze (CS - CO - DHC MT storage TB Bronze)	true	0.000	0.000		43.8600	0.00	true	Active
NL NLB45-HCI DHC (DHC service support) Akzonobel DHC	Multi-tenant storage TB Database (CS - CO - DHC MT storage TB Database)	true	130.900	130.900		70.1800	9186.56	true	Active
NL NLB45-HCI DHC (DHC service support) Akzonobel DHC	Multi-tenant storage TB Gold (CS - CO - DHC MT storage TB Gold)	true	250.538	250.538		43.8600	10988.60	true	Active
NL NLB45-HCI DHC (DHC service support) Akzonobel DHC	Multi-tenant storage TB Platinum (CS - CO - DHC MT storage TB Platinum)	true	0.000	0.000		43.8600	0.00	true	Active
NL NLB45-HCI DHC (DHC service support) Akzonobel DHC	Multi-tenant storage TB Silver (CS - CO - DHC MT storage TB Silver)	true	26.089	26.089		43.8600	1144.26	true	Active
NL NLB45-HCI DHC (DHC service support) Akzonobel DHC	Multi-tenant Tenant (CS - CO - DHC MT Tenant)	true	356.000	356.000		3.1300	1114.28	true	Active
NL NLB45-HCI DHC (DHC service support) Akzonobel DHC	Multi-tenant vCPU (CS - CO - DHC MT vCPU)	true	2458.400	2458.400		2.0300	4990.55	true	Active
NL NLB45-HCI DHC (DHC service support) Akzonobel DHC	Multi-tenant VMs (CS - CO - DHC MT VMs)	true	408.000	408.000		18.3700	7494.96	true	Active
NL NLB45-HCI DHC (DHC service support) Akzonobel DHC	Multi-tenant VMs with OS management Linux (CS - CO - DHC MT VMs with OS management Linux)	true	6.000	6.000		30.0500	180.30	true	Active
NL NLB45-HCI DHC (DHC service support) Akzonobel DHC	Multi-tenant VMs with OS management Windows (CS - CO - DHC MT VMs with OS management Windows)	true	320.000	320.000		27.9000	8928.00	true	Active

As you can see above the WU model for multi-tenant environments is more extensive.
